- Many colleges still manage events manually, which causes confusion, delays, and data errors.
- Students often miss updates because information is not shared properly.
- This project is important because it makes event management simple and organized.
- It saves time for both students and staff by automating tasks.
- In real life, digital systems are widely used in organizations for better efficiency.
- This system helps students easily find and register for events.
- Admins can manage events, participants, and updates in one place.
- Overall, it creates a smart, easy, and efficient campus event management system.

PROBLEM STATEMENT

1
2
3
4
5
6
7
8
9

- In many colleges, event management is still handled manually using paper or basic tools.
- This creates confusion in event scheduling, registrations, and communication.
- Students may miss important updates due to lack of a proper system.
- Managing participant data manually can lead to errors and duplication.
- There is no centralized platform to handle all event-related activities.
- This results in time wastage and poor coordination between organizers and students.
- Therefore, there is a need for a simple and automated system.
- The system should improve efficiency, accuracy, and communication in event management.

OBJECTIVE(S)

- To develop a **smart and automated system** for managing college events efficiently.
- To provide an **easy platform for students to view and register for events**.
- To help admins **organize, monitor, and manage events in one place**.

PROPOSED SYSTEM

1
2
3
4
5
6
7
8
9

- The system is a **web-based application** that manages all college events in one platform.
- It allows students to **view, register, and get updates** about events easily.
- Admin can **create, update, and manage events and participants** efficiently.
- It solves manual work issues by **automating registrations and data handling**.
- Reduces errors and confusion by using a **centralized database system**.
- Improves communication through **instant notifications and updates**.
- Saves time and effort for both students and organizers.
- Provides a **simple, fast, and reliable solution** compared to traditional methods.

PROPOSED SYSTEM ARCHITECTURE

1

Input

Input is the data given by users and admin.

Student details (name, email, login info),Event details (title, date, venue)

Registration information

Processing

Processing is the work done by the system.

Verifying login and user details

Handling event creation and registration

Sending notifications and updates

Managing data and generating reports

Database

Database is where all data is stored safely.

Stores users, events, registrations

Keeps records of notifications and reports

Helps in fast data retrieval and updates

Output

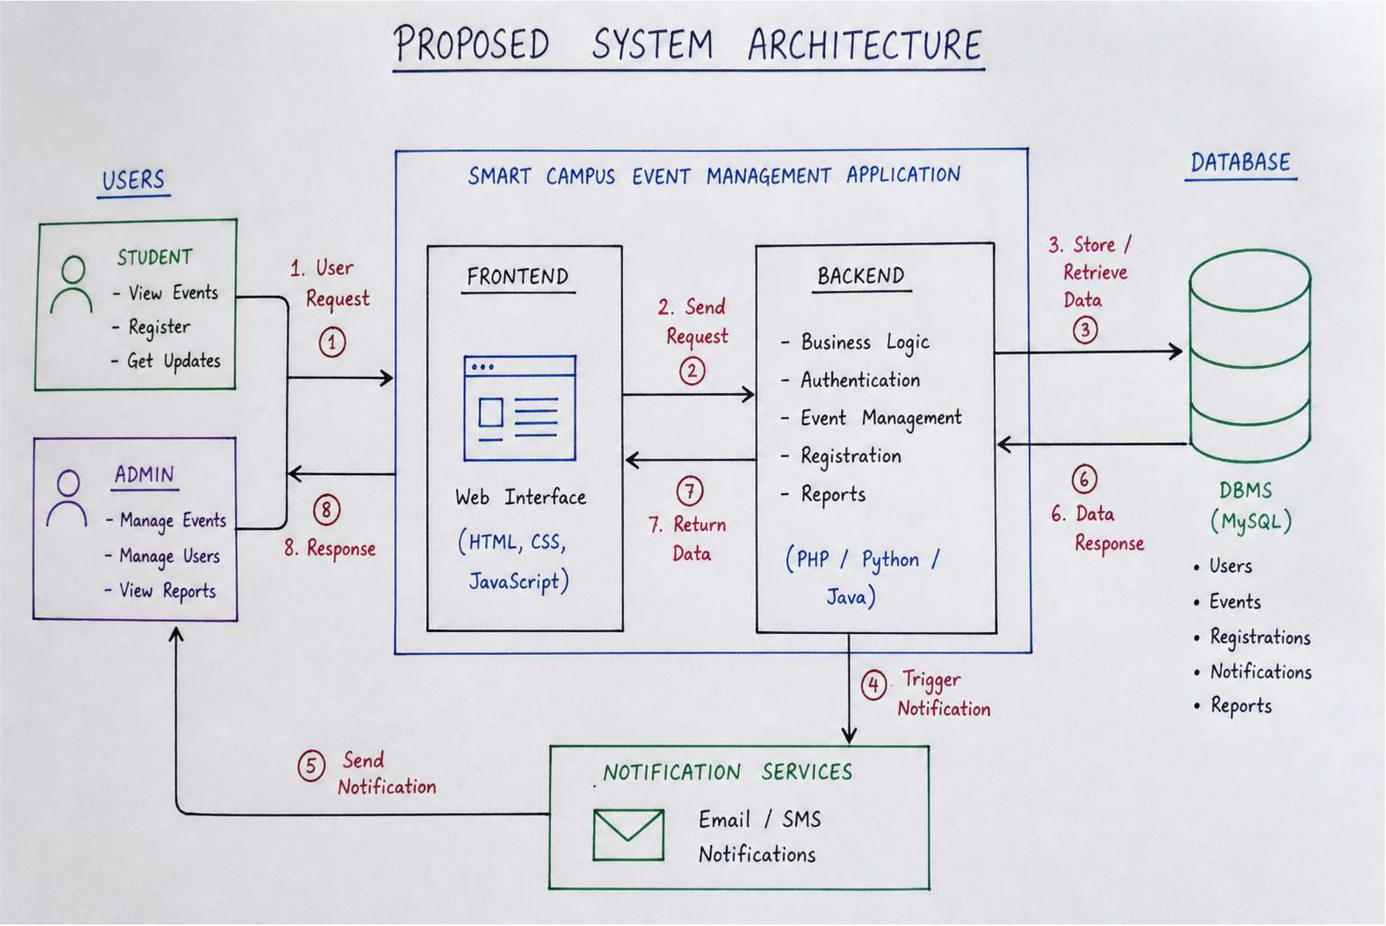
Output is the result shown to users.

Event details displayed to students

Registration confirmation messages

Notifications and updates

Reports for admin



WORKFLOW

TECHNOLOGIES USED

1
2
3
4
5
6
7
8
9

Frontend:
HTML, CSS, JavaScript (for user interface design)

Backend:
Java (Servlets/JSP) or PHP (for server-side logic)

Database:
MySQL workbench (to store user, event, and registration data)

Third-Party API:
Email API (for sending notifications and alerts)

Tools:
XAMPP / Apache Server, VS Code / Eclipse IDE

Hardware/Software Requirements:
System with minimum 4GB RAM
Windows/Linux OS
Web browser (Chrome, Edge)

MODULE DESCRIPTION

----- Example for reference only ---- (Change according to your project)

Module 1: User Management
Handles user registration, login, and profile management with secure authentication.
Module 2: Core Processing
Implements the main business logic and processes user inputs efficiently.
Module 3: Database Management
Manages data storage, retrieval, and ensures data integrity.
Module 4: Innovative Module
Third-party APIs, OTP verification, chatbot, maps, or similar enhancements
Module 5: Reporting & Analytics
Generates reports and visual insights for better decision-making.

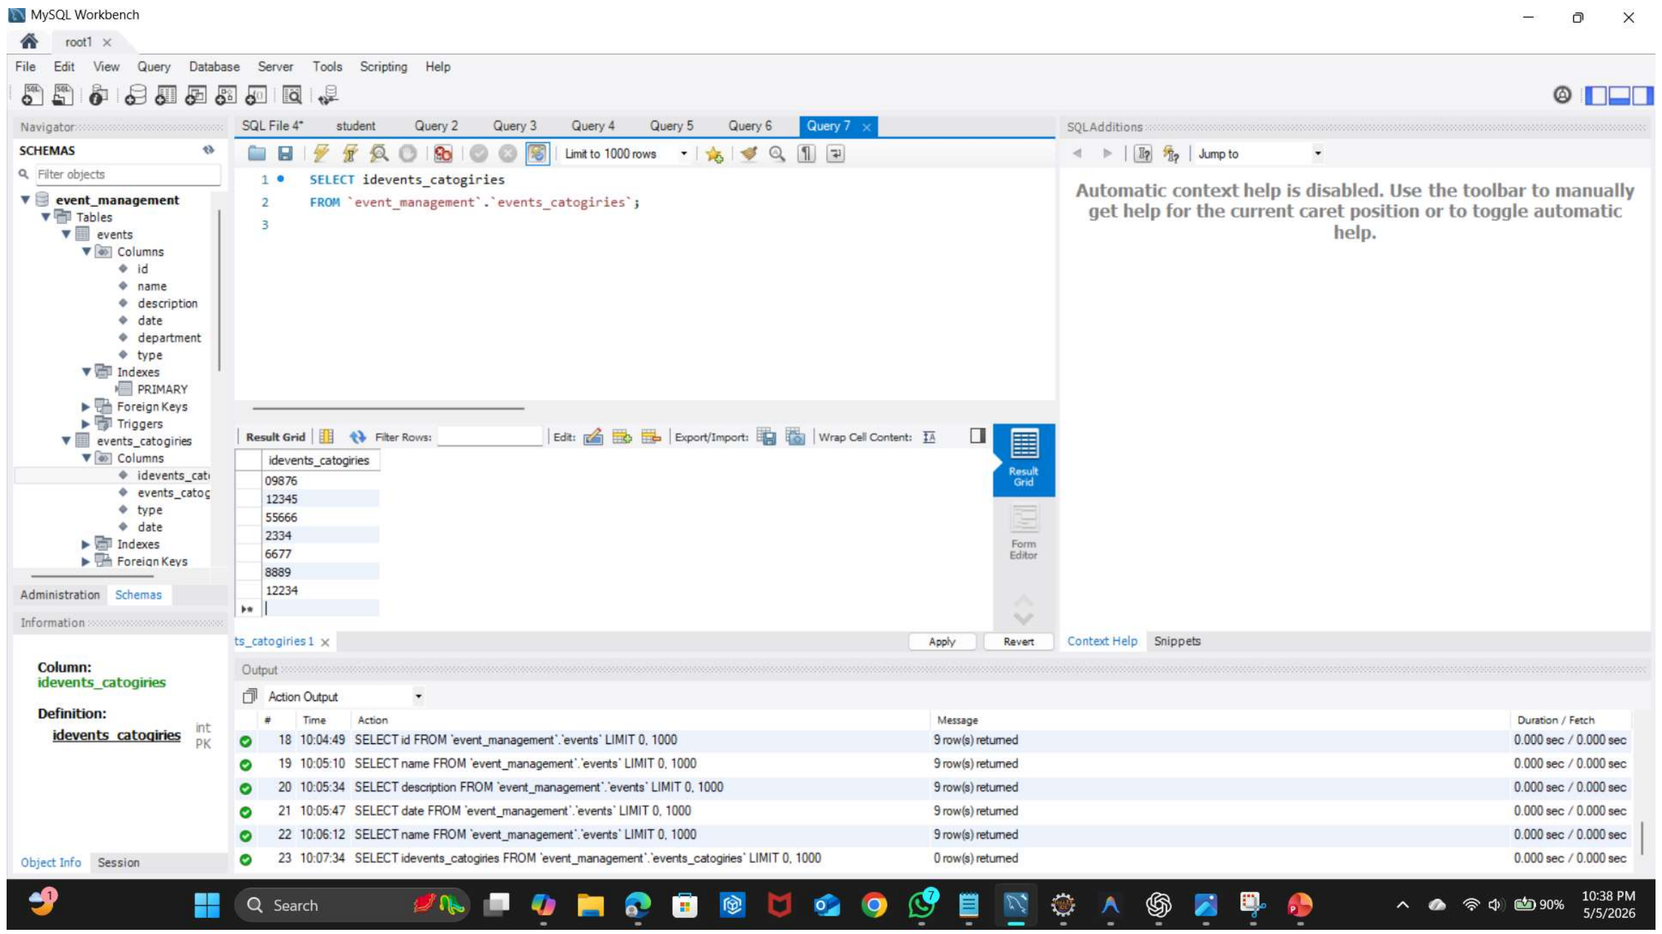
The image shows how MySQL Workbench displays and runs queries to fetch data from tables in the **event_management** database.



ADVANTAGES & LIMITATIONS

Advantages

- Easy to manage all events in one place
- Saves time by automating registration and updates
- Reduces manual errors and paperwork
- Provides quick communication through notifications
- Accessible anytime through web browser
- Improves coordination between students and organizers

Limitations

- Requires internet connection to access
- Initial setup and development may take time
- Needs basic technical knowledge to operate
- System may face issues if server is down
- Data security must be properly maintained

Thank you
